FOR IMMEDIATE RELEASE - April 14, 2010

Simaudio Ltd. proudly introduces the MOON 350P Differential Preamp, our latest addition to the MOON Series of audio components. Using circuitry derived from our MOON Evolution Series, the 350P is a modular design that accepts optional plug-in modules: (i) a 24-bit/192kHz high-performance D/A converter with USB, RCA (S/PDIF), and Optical (TosLink) inputs; (ii) a configurable MC/MM Phono stage. The 350P's wide bandwidth and excellent dynamic range allows it to effortlessly reproduce high-resolution audio. A well organized and thorough rear panel allows for connectivity to virtually any audio component.

Digital ... Analog ... or Both

The 350P includes a discrete headphone amplifier stage which allows it to effortlessly drive even the world's finest headphones. An audiophile-grade product with a toroidal transformer-based large power supply, military-spec passive and active components, and state-of-the-art surface-mount manufacturing techniques help make the MOON 350P the finest affordable MOON preamplifier to date.

MOON 350P Significant Design Features:

- Optional internal digital-to-analog converter circuit for use with a PC, digital music server or external transport, etc
Optional internal phono preamp circuit with adjustments for gain level as well as capacitance and resistance loading
7 line-level inputs (4 Single-ended & 2 balanced) including one front-mounted 1/8" mini-jack for personal media players
Discrete headphone amplifier circuit with the output on 1/4" TRS jack located on the front panel
One single-ended input which functions as a "pass-through", bypassing the gain stage to accommodate a component such as a home-theater processor, whose own volume control is used instead
A full-function monitor loop
Fixed (single-ended) and Variable (balanced & single-ended) line level outputs
An oversized power supply using 2 toroidal transformers in conjunction with 3 stages of DC voltage regulation
IR input for external control and a 12 Volt Trigger Output
RS-232 port for i) full unsolicited bidirectional feedback in custom installation setups and ii) firmware updates
SimLink controller port allows for 2-way communications between other compatible MOON Evolution Series components
A Signal-to-Noise Ratio in excess of 120dB at full output
Optimized selection of very high quality electronic components.

The MOON 350P has an MSRP of \$2,500.00 for the base version and \$3,000.00 for the loaded version; Add \$400.00 for Digital-to-Analog converter; Add \$300.00 for the phono preamp.

Available May 2010

Simaudio Ltd. has been designing and manufacturing innovative, leading-edge audio and video products since 1980. MOON products have been globally recognized for their world-class performance, garnering numerous accolades for this outstanding achievement. Our products are engineered and built in Canada, utilizing advanced, efficient, "green" assembly techniques with strict quality control. Furthermore, our manufacturing processes are part of our philosophy, whereas the high quality and long-life of MOON products are the best way to preserve our environment, avoiding premature obsolescence. MOON products meet or exceed all international requirements for safety, performance and durability. At Simaudio, great music matters. However, great music for a lifetime matters most.
