THE ART OF TECHNOLOGY

FOR IMMEDIATE RELEASE - December 18, 2002

Simaudio Ltd. proudly announces the introduction of the new **MOON Aurora Multi-Channel Amplifier**, our newest addition to the **MOON A/V series** of Home Theater components. Rated at 200 watts RMS into 8 ohms, the **MOON Aurora** is available in 5 and 7 channel configurations. Over two decades of experience in the design and manufacturing of amplifiers has paved the way for the new **MOON Aurora**.

Significant Design Features:

- Extremely fast circuitry for real-time amplification.
- An oversized power supply using a custom proprietary toroidal transformer design with lower magnetic, electrical and thermal loss, yielding an improved power transfer and lower regulation factor, resulting in increased current speed and greater dynamics.
- Rated power output of 200 watts RMS into 8 ohms and 400 watts RMS into 4 ohms.
- "Rack mount ready" faceplate with removeable aluminum cheeks to cover the rack holes when not in use.
- Thermally interconnected chassis design which enhances sonic harmony by maintaining identical operating temperatures for all channels.
- 6 Precision-matched Bipolar output devices per channel.
- Class A output to 5 watts for greater efficiency.
- 12 Volt trigger input for remote operations.
- A very short capacitor-free signal path for a faster transient response.
- A high damping factor which generates superior musical dynamics, improved signal speed and refined timbre accuracy.
- Pure copper circuit board tracings with low impedance characteristics.
- Low operating temperature for a longer than normal life expectancy.
- Designed to be powered up at all times for optimal performance.
