

**M O O N**

... The leading edge in music & film reproduction

**FOR IMMEDIATE RELEASE - August 29, 2003**

**Simaudio Ltd.** proudly announces the introduction of the **MOON LF-S** and **MOON LF-A** AC Line Filters. Designed specifically for high-end audio & video applications, they provide a clean AC signal to your source component, preamplifier (LF-S) and amplifier (LF-A). Both AC line conditioning products use accurate filter slopes at specifically targeted frequencies to achieve the desired amount of filtering. Thorough subjective listening tests confirmed that i) these filter frequencies do not limit the musical reproduction capabilities of any MOON products connected to the **LF-S** or **LF-A** and ii) that they avoid the typical "choking out" of high-current demands required for musical peaks.

The internal circuitry of both the **MOON LF-S** and **MOON LF-A** employ the highest grade of electronic parts in a passive, short signal path featuring a "non-current limiting" configuration. Each model includes two high-current 15A hospital grade AC outlets, with an IEC 15A input receptacle to accommodate your favorite high-end AC power cord.

**Significant Design Features:**

- Lowers noise floor by as much as 42dB.
- Eliminates RF and EMI interference from the AC line.
- Heavy-gauge and extremely rigid chassis construction.
- Brushed and anodized faceplate matching all MOON series components.
- "Low Q" filter with attenuation at 12kHz for the LF-S and 18kHz for the LF-A.
- Reduces high-frequency hash resulting from poor AC lines.
- 60Hz Impedance is 15 milli-ohms for the LF-S and 6 milli-ohms for the LF-A.
- Protects against AC power surges and spikes.
- Improves soundstage focus and video clarity.
