

MOON

... The leading edge in music & film reproduction

FOR IMMEDIATE RELEASE - May 11, 2007

Simaudio Ltd. proudly introduces the **MOON LP3 Phono Preamplifier**, our newest addition to the **MOON Classic series** of audio components. Based on its big brother, the MOON LP5.3, the **MOON LP3** represents a significant step forward in affordable phono preamplifier design. Great detail has been paid to noise levels and dynamic range, making it one of the quietest phono preamplifiers at its price level. Sonically, it portrays all the Simaudio hallmarks: clean, powerful, fast and extended bass combined with an open midrange and airy extended high frequencies. One of the strengths of the **LP3** is its flexibility with respect to end-user adjustments for resistance and capacitance loading as well as gain; changing your cartridge will not force you to change your phono preamplifier. As well, unlike most of the competition, which either uses mass-manufacturing techniques or a circuit mounted in a basic folded metal box, the **MOON LP3** is housed in an ultra compact, rigid all-aluminum chassis with a brushed and anodized front panel.

*"Over **25** Years of Excellence"*

MOON LP3 Significant Design Features:

- End-user adjustable impedance loading (100 and 47kΩ).
- End-user adjustable capacitance loading (0 and 100pF).
- End-user adjustable gain settings for moving magnet (40dB) and moving coil cartridges (60dB).
- External power supply.
- Two-layer PCB tracings using pure copper for low impedance characteristics. The advantages include better circuit layouts resulting in a much shorter signal path and a vastly improved signal-to-noise ratio.
- Power supply voltage regulation incorporates Inductive DC Filtering for a significantly lower noise floor.
- Accurate matching of military-grade components with ultra-tight tolerances using surface-mount technology for extremely short signal paths.
- Compact, rigid all-aluminum chassis with gold-plated RCA connectors.
- Low operating temperature for a longer than normal life expectancy.
