

M O O N

Power.

Emotion.

Soul.

FOR IMMEDIATE RELEASE - January 7, 2009

Simaudio Ltd. proudly introduces the MOON i3.3 Integrated Amplifier, one of our newest additions to the MOON series of audio components. The i3.3 redefines the possibilities of what an integrated amplifier can be. Loaded with numerous convenient features and unbeatable sonic performance, the MOON i3.3 provides for unprecedented flexibility. Featuring an options package unheralded in the world of high-performance audio, especially at its pricepoint, available options include (1) an internal digital-to-analog converter (USB-2, S/PDIF & TosLink digital inputs), (2) an internal RIAA phono preamplifier (MM & MC) and (3) a balanced line-level input. All 3 of these options are available in any combination, either at the time of purchase or as a future upgrade. The MOON i3.3 allows you to integrate your music system in distinctively new ways.

Thirty years of experience in the design and manufacturing of award winning high-performance components has paved the way for the new MOON i3.3; An Integrated Amplifier that will be the heart and soul of your home-entertainment system for many many years ... call it the the birh of a legend.

“Celebrating 30 Years of Excellence”

MOON i3.3 Significant Design Features:

- An oversized power supply using a custom toroidal transformer design
Rated output of 100 watts/channel into 8 ohms, 200 watts/channel into 4 ohms and "Class A" output to 5 watts
Five line-level single-ended inputs including one front-mounted 1/8" mini-jack for personal media players
Optional internal digital-to-analog converter circuit for use with a PC, digital music server or external transport, etc
Optional internal phono preamp with adjustments for gain level as well as capacitance and resistance loading
One optional line-level balanced XLR input
Headphone output on 1/4" TRS jack located on the front panel
SimLink controller port allows for 2-way communications between other compatible MOON components
RS-232 port for i) full unsolicited bidirectional feedback in custom installation setups and ii) firmware updates
IR input for external control and 12 Volt trigger output for remote operations
Four (4) bipolar output devices per channel in the amplification section which offer superb linearity throughout the entire audio frequency spectrum

The MOON i 3.3 will have an MSRP of \$3,300.00 for the base version and \$4,000.00 fully loaded version; add \$400.00 for Digital-to-Analog converter, \$300.00 for the phono preamp, and \$200.00 for XLR output.

Simaudio Ltd. has been designing and manufacturing innovative, leading-edge audio and video products since 1980. MOON products have been globally recognized for their world-class performance, garnering numerous accolades for this outstanding achievement. Our products are engineered and built in Canada, utilizing advanced, efficient, "green" assembly techniques with strict quality control. Furthermore, our manufacturing processes are part of our philosophy, whereas the high quality and long-life of MOON products are the best way to preserve our environment, avoiding premature obsolescence. MOON products meet or exceed all international requirements for safety, performance and durability. At Simaudio, great music matters. However, great music for a lifetime matters most.
